

# BMO SMART REMOTE MONITORING SYSTEM

BSM is a smart MES system developed by BMO, helping to seamlessly control and monitor the entire production process, providing clear management capabilities and data visibility throughout the whole process.

## 01 Real-time monitoring

BSM provides a visual and instant overview of the entire fabric spreading process, helping to track the production status accurately and continuously.

## 02 Smart reporting system

Supports rapid decision-making through visual data and detailed reports.

## 03 Operations management

Optimizes the workflow from the technical department to the production area, improving overall operational efficiency.
